

Banking 365

One solution. For all Countries

a solution by

<Globalix
365>

**Unified and interactive
banking platform**

¿What is Banking 365?

is the unified and interactive banking platform, developed by AW Global. Which means it doesn't matter how many banks, payments types or different technologies to plug in (connect).

Reliable, scalable, flexible, versatile solution

RELIABLE

- It's been developed under ISO 20022 standard – it complies with International banking messaging and data exchange among them, with clients, users, regular market infrastructures y regulatory agencies.
- 100% managed within Azure services and according to Microsoft security policy for the platform.
- Reliable encrypted H2H connection.

SCALABLE

- It avoids developing and building integration with every bank, given the package of extensions for all of them needs to be displayed once only because it is entirely configurable.

FLEXIBLE

- Any connectivity type is supported, given it's able to work either asynchronous or on-line. Even, in case it is required, to interact manually if flat-file extraction were needed.
- "Banking 365 Extended Codes" functionality makes possible to create and configure additional fields, to easily generate new codings any bank or agency might require.

VERSATILE

- When initial Banking 365 within the ERP environment is displayed, all configuration, connectivity or upgrades are worked out in an intermediate layer inside the solution, with no need to work through the ERP code.
- Easy to add new Banks or formats without interrupting the ERP service.
- Any currency or payment method (owned or third parties accounts, e-checks, notes or payroll) are supported.
- Receipts attached (eg. withholdings taxes).

SOLUTION SCOPE

Available for Microsoft Dynamics 365

Finance

Localis
365

Architecture

- Unified Host to Host (H2H) platform.
- Working 100% on Azure service, with no impact in ERP performance.
- Reliable. Secured Messaging and Communication channel.

Scalable Solutions Ready to Go.

**Discover our offering designed to
integrate seamlessly into any
Microsoft Dynamics 365 project.**

At Globalix 365, we specialize in developing functional solutions for the Microsoft Dynamics 365 ecosystem, focusing on solving the critical pain points that hinder implementations in Latin America: tax localization, electronic invoicing, banking automation, and more.

Invoicing 365

Electronic invoicing across multiple Latin
American countries. Integrates with local tax
services, enabling the issuance, validation, and
tracking of invoices directly from the ERP.

Banking 365

Import, export, and reconciliation of banking
transactions
in over 30 countries. Works with official layouts and
local banking standards, integrating into the ERP's
accounting logic without invasive customizations or
external connectors.
